Linux System Call Table for x86_64

Linux 3.19, x86_64

Note: 64-bit x86 uses syscall instead of interrupt 0x80. The result value will be in %rax

To find the implementation of a system call, grep the kernel tree for SYSCALL_DEFINE.\?(*syscall*,
For example, to find the read system call:

```
illusion:/usr/src/linux-source-3.19$ grep -rA3 'SYSCALL_DEFINE.\?(read,' *
fs/read_write.c:SYSCALL_DEFINE3(read, unsigned int, fd, char __user *, buf, size_t, count)
fs/read_write.c-{
fs/read_write.c-        struct file *file;
fs/read_write.c-        ssize_t ret = -EBADF;
```

The results show that the implementation is in fs/read_write.c and that it takes 3 arguments (thus
SYSCALL_DEFINE3).
Linux Cross Reference is another good tool for finding information about system calls.

By the way, the system call numbers are different for 32-bit x86. A system call table for i386 (32-bit) can be found
at http://docs.cs.up.ac.za/programming/asm/derick_tut/syscalls.html

Information on the order of registers can be found on page 124 of the x86_64 ABI paper at http://www.x86-64.org/documentation/abi.pdf

%rax	System call	%rdi	%rsi	%rdx	%r10	%r8	%
0	sys_read	unsigned int fd	char *buf	size_t count
